

2023 BOND PROPOSITIONS

A

- 8 New Schools
- 3 Additions
- 5 Major Renovations
- 2 Master Plans
- Infrastructure
- Safety
- Land
- Transportation
- Tech. Infrastructure

\$1,820,000,000

B

- Technology Devices

\$40,000,000

C

- 16 PE Classrooms/
Elementary Gyms
- CTE - Ag Barns

\$112,877,000

D

- Pool
*outdoor pool & Natatorium
mechanical refurbishment*

\$22,900,000

THREE SCENARIOS OF GROWTH

- Low/High Range
- Projected
- Actual

the 1990s, the number of people with diabetes has increased in all industrialized countries. In the Netherlands, the prevalence of diabetes is estimated to be 6.5% in 1995, which corresponds to 1.5 million people (1). The prevalence of diabetes is expected to increase to 10% in 2010 (2).

Diabetes is a chronic disease with a high prevalence and a high mortality. The mortality of diabetes is due to cardiovascular complications, which are the leading cause of death in people with diabetes. The prevalence of cardiovascular complications is higher in people with diabetes than in people without diabetes (3). The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4).

The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4). The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4). The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4).

The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4). The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4). The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4).

The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4). The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4). The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4).

The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4). The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4). The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4).

The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4). The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4). The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4).

The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4). The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4). The prevalence of cardiovascular complications is also higher in people with diabetes than in people with other chronic diseases (4).
